

ManagedCuda extended “GPL” license

ManagedCuda is a set of software libraries written by Michael Kunz and distributed by

Artic Imaging SARL, 540, 1ère Avenue, 06600 Antibes, France

that provides access to NVIDIA®’s CUDA® API and several of CUDA enabled utility libraries (CUFFT, CURAND, CUSPARSE, CUBLAS, CUSOLVER, NPP, NvJitLink, NvJPEG and NVRTC) from the .net platform. This license covers the terms and conditions for copying, distribution and modification as following.

ManagedCuda is available under GNU General Public License version 3 or a commercial license.

The GNU General Public License version 3 does not allow integrating GPLv3 source code or its compiled binaries into a BSD licensed project.

This extended ManagedCuda “GPL” license thus grants the Seq2SeqSharp project (<https://github.com/zhongkaifu/Seq2SeqSharp>) the right to use ManagedCuda in form of source code or compiled binaries under the following two conditions:

- Any derivative work of Seq2SeqSharp is allowed to use ManagedCuda under the same license terms as Seq2SeqSharp, if ManagedCuda is only used through or for Seq2SeqSharp.
- If a derivative work of Seq2SeqSharp uses ManagedCuda independently from Seq2SeqSharp, the standard GPLv3 license applies for ManagedCuda.
